SZ Parked:		to	
SZ A/History:		to	
SZ Age:		to	
DNS Changes:		to	
SZ Drops:		to	
Drop Date:		⌄	
Min Indexed Pages:			

SZ Score SpamZilla's internal spam score (lower is better) 🔴 High score (e.g. >10) often indicates spammy backlinks, suspicious history, or penalties. Best to filter for 0 to 3 for clean domains.

SZ Redirects Number of times the domain was used for 301 redirects 🔴 High values (>2) may mean it was abused for redirecting juice (PBN or churn-burn), increasing risk of penalty.

SZ Parked Times it was parked with domain parking services (like GoDaddy Parking) ⚠️ High parking count suggests lack of real usage; not a major penalty risk but may mean low value.

SZ A/History Number of times Wayback Machine has archived the domain 🟢 Higher = strong historical footprint. 🔴 Very low or 0 = weak or suspicious history. Use 10+ for better assurance.

SZ Age Estimated domain age (based on earliest known record) 🟢 Use this to find older domains (e.g. 5+ years) — age is a trust factor in SEO.

DNS Changes Number of DNS changes 🔴 Many changes (e.g. >5) may indicate ownership churn or spam usage.

SZ Drops Number of times the domain dropped/expired before 🔴 High drops = instability or prior spam. Aim for 0 to 1.

Drop Date Last date when the domain dropped Use this to target recently dropped domains or avoid ones that dropped long ago. Fresh drops = higher indexing chance.

Min Indexed Number of pages indexed in Google 🟢 Ensure domain is not deindexed. Enter >0 to filter out penalized or deindexed domains.

Pages Total number of discovered pages (via archive/backlinks/etc.) Use this to find domains with deeper content history (useful for topical authority or redirection targets).

Recommended Safe Settings to Avoid Penalized Domains
SZ Score 0 to 3
SZ Redirects 0 to 1
SZ Parked 0 to 1
SZ A/History 10 to (no upper limit)
SZ Age 5 to
DNS Changes 0 to 3
SZ Drops 0 to 1
Min Indexed 1+
Drop Date Recent 1–3 months (optional)
